Project Title: Smart Waste and Recycling Management System

Individual Role/Contribution

My individual role in the project was **Frontend and User Interface Developer**. I was responsible for designing and developing the user interface of the Smart Waste and Recycling Management System and ensuring that users could interact with the system easily.

Modules/Tasks Completed

- Designed the user interface for the waste management system.
- Developed screens for entering and viewing waste-related information.
- Created navigation between different sections of the application.
- Worked on user input forms and displayed system information clearly.
- Integrated the frontend interface with the Python functionalities developed by the team.
- Tested the user interface with different inputs.
- Assisted in identifying and correcting interface-related errors.

Brief Description of the Work Carried Out

The Smart Waste and Recycling Management System is designed to make waste management and recycling activities more organized and efficient. My contribution focused mainly on the user interface and interaction part of the application.

I designed the different screens required for users to interact with the system. I created input forms through which users can enter waste-related information and developed suitable sections for displaying the stored information. I also worked on navigation so that users can move between the different functionalities of the system easily.

I coordinated with the other team members to connect the interface with the Python application logic. I tested the screens and user inputs to ensure that the application responded correctly. During testing, I helped identify interface problems and worked with the team to resolve them.

Outcome/Learning from the Contribution

Through this project, I gained practical knowledge of **user interface development, Python application integration, input handling, testing, and debugging**. I also learned how to design an interface that is simple and easy for users to understand. Working with the team improved my communication, coordination, and problem-solving skills.
